

# The webshop for self-build radio amateurs

## HF Kits

HF Kits provides complete self-build kits and spare parts for radio amateurs. Self-made is so much fun! The self-build packages in the webshop are made up of quality parts.

You won't find any ready-made mysterious wonder antennas or self-build sets with cheap speaker wire. What you will find here: BalUn's, End Fed Antennas, Dipole Antennas, Antenna Traps and Common Mode Chokes self-build kits. Of course, parts will also be available such as: ferrite, Antenna Litze, housings, winding wire, stainless steel, fastening material, shrink sleeve, isolators, coax cable, RF connectors and interface connectors. The aim is to continuously expand the assortment.

## Why choose Self-build

Self-construction has many advantages for radio amateurs. The self-construction project has no secrets, you know what is in the process. The quality is often better than with standard products. Certainly for BalUn's there are a lot of lousy standard products in circulation. Knowing exactly how your own construction project works is easy to adjust, improve, or repair. This is often a big challenge for ready-made products. Ready-made products are often deliberately glued which makes only the opening of the housing a huge challenge. By choosing self-build you save a lot of money on the purchase. The most important thing is of course the fun you are experiencing building. If you do not enjoy, don't choose for self build kits. ;)

## Passion for Antenna technology

The Kits have been carefully selected so that the radio amateur can build as easy as possible. Of course a self-build kit has a clear practical construction description. We do our best to write as many articles as possible about the underlying theory, which makes it clear what exactly you have created.

## Why Choose HF Kits

### Excellent quality

High quality parts in self-build kits.

## Fast Delivery

HF Kits sends 95% of packages within 24 hours

## Pay safely

You can pay safely in our webshop in various ways.

## Good service

Satisfied customers are our top priority. We also provide personalised service.

## Clear description

We provide a clear online construction description

## Sufficient stock

Sufficient stock. If a product in the webshop is “stocked” you can assume that the products are actually on the shelf.
